 <p style="text-align: center;">CDM: Response form for request for clarification on Approved Methodologies (version 01.1)</p>	
<i>Date of Meth Panel meeting:</i>	12 - 16 November 2007
<i>Title and number of request for clarification</i>	Ex post monitoring of the adjustment factor for landfill projects AM_CLA_0057
Summary of the query:	
Please use the space below to summarize the request for clarification on the related approved methodologies.	
<p>The request for clarification is submitted by TUEV-SUED and it concerns to the approved consolidated methodology ACM0001 Ver. 06 “Consolidated baseline and monitoring methodology for landfill gas project activities”. The methodology gives the following guidance regarding the adjustment factor (AF): "in cases where a specific system for collection and destruction of methane is mandated by regulatory or contractual requirements, the ratio of the destruction efficiency of that system to the destruction efficiency of the system used in the project activity should be used." Clarification is sought on whether the “destruction efficiency of the system used in the project activity” can be monitored ex-post in order to update the adjustment factor annually according to monitored data. A procedure is provided for this monitoring and how the AF will be calculated every year.</p>	
Recommendation by the Meth Panel:	
Please use the space below to provide amendments /changes (in your expert view, if necessary).	
<p>The methodology gives following guidance on how to estimate AF in section of Baseline Emissions. ” In cases where a specific system for collection and destruction of methane is mandated by regulatory or contractual requirements or is undertaken for other reasons, the ratio of the destruction efficiency of that system to the destruction efficiency of the system used in the project activity shall be used.”</p> <p>The Meth Panel clarifies that the destruction efficiency of the system used in the project activity can be monitored ex-post in order to update the adjustment factor either once for each crediting period or annually as suggested The consolidated methodology ACM0001 is revised to provide a new procedure for estimation of AF. In this procedure the destruction efficiency of the system used in the project activity can be either estimated once and fixed for the whole crediting period or can be estimated every year.</p>	
Answer to authors of the request for clarification by the Meth Panel :	
Please use the space below to provide an answer to the authors of the above query	
Please, refer to the section above.
