

Confirmation of Validation

Industrie Service

The certification body "Climate and Energy" of the DOE TÜV Industrie Service GmbH TÜV SÜD Group has performed a validation of the project:

Cruz Alta Bagasse Cogeneration Project (CABCP).

The results of the validation are documented in the final report no. 438562 REV 02 B, issued on December 23, 2005 and are based on submitted PDD December 22, 2005.

The final report and PDD were issued after the issuing of letter of approval (LoA) from the competent designated national authority (DNA). During the process of issuing the LoA minor changes in the PDD were necessary due to more current available data and new guidance from the EB.

The changes do neither affect the validation opinion confirming that submitted project fulfils UNFCCC requirements before issuing the LoA nor after the issuing.

Munich, 23/12/2005
