Dear Moderator

In response to your call for input on regional distribution of CDM project, only two PINS and others identified projects not yet developed are in pipeline of DNA Togo because of lack of capacities and the high cost of validation, Any CDM project was registred or under registration process. So, Togo is eligible for regional and subregional distribution and capacity-building

For the call regarding the views of stakeholders for the efficiency in the operation of the CDM and opportunities for improvement, increasing number of DOE and accreditation of DOE in africa, revising the cost of validation that is to high, building capacity in frica according to the real needs of countries, finalising the Addis Abeba strategic to improve CDM in africa would be necessary to improve CDM in the least developed countries, small island developing States and Africa

Best regard
