

Annex 9

Scope of the review on “Olavarría Landfill Gas Recovery Project (029)”

1. The Board agreed to undertake a review of the “Olavarría Landfill Gas Recovery Project (029)”.
2. The Board agreed that the scope of the review relating to issues associated with validation requirements shall cover:
 - (a) Bearing in mind a link to eligibility of the project activity as a small-scale CDM project activity:
 - A more detailed justification of the chosen calculation of project emissions, given that the CDM-PDD provides for three different interpretations of the direct project emissions;
 - The public comment relating to the calculation of project emissions should be taken into account;
 - (b) The DOE has listed as a remaining "corrective action request" (CAR) that detailed operational guidelines/manuals and the necessary provisions for meeting training and maintenance needs have yet to be developed, and that this has to be done at the latest "before the start of the commissioning" of the project. The DOE needs to stipulate how it will be asserting that this CAR has been closed successfully;
 - (c) Disclaimer by the DOE should be removed.
3. The Board requested Mr. Xuedu Lu and Ms Sushma Gera to be responsible for supervising the review of this project activity and that Mr. Juan Pablo Bonilla and Mr. Mahasaru Fujitomi will participate in the review team. The review team may call on outside expertise, as appropriate.
