

Annex 9

Request for Public Inputs on Biofuels

Inputs are invited from the public on the following issues concerning production and use of biofuels:

- Consideration and quantification of negative leakage from the production and application of fertilizers, transportation emissions, emissions resulting from the esterification process;
- Consideration and quantification of positive leakage resulting from credits for co-products (e.g. Glycerine, Soymeal);
- Methodological options for estimating the energy and baseline emissions for cases where biofuels are blended with fossil fuels;
- Methodological options for monitoring of emission reductions when biofuels are blended with fossil fuels;
- Methodological options for estimating and monitoring the emission reductions in situations where the ratio of the biofuel in the blend varies as in the case of flexible fuel engines.
