

**REVIEW OF THE PROJECT ACTIVITY****Grid-connected electricity generation from renewable sources at Satara by
M/s Bajaj Auto Ltd. (BAL) using wind Power (0221)**

Considering that the barrier analysis presented in the PDD was not sufficiently convincing and that the DOE and the project participant failed to provide additional information to substantiate any of the technological, investment and prevailing practice barriers and/or to conduct an investment analysis, the Board concluded that the proposed project activity did not meet additionality requirements as stipulated in paragraphs 43 to 52 of the CDM modalities and procedures and agreed to reject this activity.
