Please indicate reasons for the request for review and attach any supporting documentation to this request form. (if space is not sufficient please attach further reasons)	
<p>According to the validated monitoring plan, there is only one parameter to be monitored. It is electricity supplied to the regional electricity grid. Electricity sold to the grid is presented monthly in the monitoring report. Electricity generation presented in the monitoring report is stated as “Gross Generation” (please see Section 8 of the monitoring report, table presented in the last two pages – no page numbers are inserted in the monitoring report).</p> <p>However, electricity generation used for the calculation of GHG mitigation should be the electricity sold to the grid. Electricity exported to the grid is always smaller than the gross generation as a small portion of the electricity is used for auxiliary consumption. This needs to be clarified.</p>
