<p>The project proponent/DOE should clarify why value for carbon emission factor of natural gas (IPCC) used in calculating the OM & BM in the monitoring report (17.2 tC/TJ) is different from the value in the registered PDD (15.3 tC/TJ). The participant has not provided reason why a different value is being used in the monitoring report.</p> <p>Likewise the verification report does show the use of a different natural gas emission factor in the CER calculation for this monitoring period. Again clarification is needed.</p>
