Request for Review

"Zillo Lorenzetti Bagasse Cogeneration Project (ZLBC)" (0202)

Dear Sir/Madam,

Please find below the response of the project participants (Usina Barra Grande de Lençóis S/A, Açuaireira Zillo Lorenzetti S/A, Ecoinvest Assessorial Ltda.) and the TÜV NORD JI/CDM Certification Program to the requests for review for the above mentioned project no. 0202.

If you have any questions do not hesitate to contact us.

Yours sincerely,

TÜV NORD JI/CDM Certification Program

Rainer Winter

Request for Review (1-4)	
Issue raised by EB Members / DNA	<p><i>"The project activity is claiming zero project emissions in the monitoring report since it is indicated in the PDD that no fossil fuel will be consumed. However, it is unclear from the verification report how the DOE has verified no fossil fuel has been consumed and thus confirming zero project emissions. Although the monitoring plan does not specify the requirement for monitoring of the fossil fuel used within the project boundary, the monitoring methodology applied to this project activity stipulates this requirement. The DOE should have verified that no emissions from the consumption of the fossil fuel have been generated by the project activity in accordance with the approved methodology."</i></p>
Response of project participant	<p>Methodology AM0015 requires the monitoring of CO2 emissions from fossil fuels combusted due to the project activity at the project site, where relevant.</p> <p>The only emissions due to fossil fuels at the project site are due to the transportation of sugar cane, by trucks, to the sugar mill. This transportation existed already in the baseline, and did not change because of the project, so that there are no net changes in CO2 emissions from fossil fuels due to the project activity. See annexed a document provided by Caldema, the boilers' manufacturer and provider of maintenance services, stating that the equipment was designed to burn sugar cane bagasse and must not be put in operation burning other types of fuels.</p> <p>Zillo monitors constantly that there are no relevant sources of fossil fuel emissions due to the project activity at the project site, and confirms that project emissions are zero. This information will be included in the Monitoring Report.</p>
Response of DOE	<p>The equipment in operation to produce electricity at Zillo Lorenzetti Bagasse Cogeneration Project is not appropriate to combust fossil fuels. This was verified during the on-site visit. Moreover there were no evidences like a stockyard for fossil fuels, a natural gas connection or records of fossil fuel delivery at the project site that indicate any use of fossil fuels for combustion. Therefore it can be concluded that no emissions from the consumption of the fossil fuel have been generated in the project activity. Additional information has been included in the revised verification report (chapter 4.1.2).</p> <p>Furthermore the project proponents revised the monitoring report, including respective information concerning the conducted monitoring of potential project emissions.</p> <p>If this information (incl. the revised monitoring report and verification report) is not sufficient to close the request for review, we appoint Ms. Maria Carolina Crisci Coelho as our contact person.</p> <p>Ms. Maria Carolina Crisci Coelho BRTÜV Alameda Madeira, 222 - 3o. andar (floor) CEP (ZIP) 06454-010 Barueri - São Paulo - Brazil Phone: +55 11 4689.9400 Email: maria.carolina@brtuv.com.br</p>
