1. The monitoring plan and the approved methodology require double check of electricity supplied by the project activity with the receipt of sales. However, neither the monitoring report nor the verification report mentioned this double check. Further information is required on how the DOE verified the electricity generation of the project. 2. The DOE shall further clarify whether the repeated power outages in a short period in 2006 would have required recalibration/readjustment of the meter after the outage of the plant.
