<p>The baseline emission (methane emissions due to uncontrolled burning of biomass) has been calculated using ‘additional biomass’ rather than from the quantity of biomass used as fuel in the project plant and net quantity of heat generated in the plant and boiler efficiency as prescribed by Equation 24,ACM0006v1 for Scenario 3 applied by the project activity. Further, the project emission (methane emissions from combustion of biomass) also considers only the quantity of the ‘additional biomass’. Clarification is required on how the calculations of emission reductions, including the use of biomass power generation factor fixed for the whole crediting period, have been conducted in accordance with the methodology.</p>
