<ol style="list-style-type: none"> 1. The total amount of electricity imported in October 2006 was calculated from the monthly invoice. However the methodology requires this parameter to be continuously measured. Further clarification is required on how the DOE verified the total amount of the electricity import. 2. No methane was measured in the exhaust gas for calculating the flare efficiency while the monitoring plan requires the methane content of the flare emissions to be analysed at least quarterly. Further clarification is required on how the DOE verified the flare efficiency. 3. The required values for calculating the quantity of methane destroyed by flaring (Mdf_lared) presented in the spreadsheet can not reproduce the same result (5,138 tCH₄) stated in the monitoring report. Clarification is required.
