<ol style="list-style-type: none"> <li>The monitoring report states that the flow rate of the manure after aerobic treatment and the five-day Biological Oxygen Demand (BOD) of the treated manure were calculated, while the monitoring plan and the approved methodology require the measurement of these parameters. In addition the temperature in the treated manure flow has not been monitored as per the monitoring plan. However the approved methodology requires the measurement of this parameter to confirm there was no leakage emissions. The verification report has not appropriately addressed these deviations.</li> <li>Please address the discrepancies of emission reductions between in the form of request for issuance of the Verification Report and in the spreadsheet of the final monitoring report.</li> </ol>
