<p>1. The auxiliary electricity consumption and the total power consumption at the waste water treatment system were not measured, but calculated based on the estimated total rated capacity of auxiliary equipment of the power plant and wastewater treatment system respectively and the operation days. This deviates from the monitoring plan which requires these two parameters to be measured. Clarification is required how the DOE verified these two parameters in line with the monitoring plan.</p> <p>2. The grid emission factor of 0.88318 tCO<sub>2</sub>/MWh has been used in the baseline emissions calculation , however is the validated value as stated I n the PDD is 0.883tCO<sub>2</sub>/MWh . Clarification is required how the DOE verified the conservativeness of the application of this value.</p> <p>3. Monitored values of parameters including the quantity and NCV of biomass used, pressure and temperature and density of methane, methane content of the biogas and volume of biogas sent to the engine were not contained in the monitoring report. Further information is required.</p>
