Bonn, Germany

Dear Daniele,

ICONTEC wants to answer the Request for Review (1, 2 and 3) on La Vuelta and La Herradura Hydroelectric Project (ref. 735) verification, about: "The DOE is required to clarify how it double-checked the electricity supplied by the project activity to the grid by receipts of sales which is required by applied methodology ACM0002 version 6."

Besides the cross check referred to on page 16 of the Verification Report, electricity supplied by the project activity to the national grid was double checked by comparing, directly in XM headquarters, the generation data of La Vuelta and La Herradura Hydroelectric Project submitted to XM by EPM, with those used by XM to execute the commercial accounting for the whole national market. Taking into account that these are just the data source from receipts of sales are produced by the Commercial Department of XM, the DOE considered that this approach is equivalent to the one claimed by applied methodology ACM0002 version 6, and, by the way, more reliable. This was exceptionally possible due to a technical visit to XM installations was included in the onsite Verification, given that XM is sited in Medellín, the same city where EPM, the project owner, is located.

ICONTEC will include in the verification report (CDM-VER 4 version 6) this clarification in the item 3.3.1 literal a), Measurement cross-check part.

Best regards,

Juan Alberto Gracia
CDM Coordinator Service
ICONTEC
