

REVIEW OF THE PROJECT ACTIVITY

Uruba Renewable Irrigation Project (0761)

The Board agreed to reject the project activity “Uruba Renewable Irrigation Project ” (0761) submitted for registration by the DOE (DNVCert), considering that the PDD used the approved small scale methodology AMS-I.B which is meant for the direct provision of mechanical energy to a user and as such is not applicable to the project activity providing electricity to multiple users, therefore the project activity did not comply with the requirements stipulated in paragraph 37 (e) of the CDM modalities and procedures.
