GACL : WORKS

NO.GACL/2003

January 22, 2003

Sub: CDM Initiatives

The company has issued the Energy Management Policy and it is desired that necessary steps are taken at all levels to ensure reduction in energy consumption by optimising operations and maintenance. During the last EEC meeting I was informed that in order to further implement technology upgradation steps, there would be need of additional investments for replacement/additions of some of the equipments even if the present equipments are in working order.

I have discussed this issue with Director, MOEF during my last meeting and he has informed that all energy conservation steps by replacement/modernisation/additions etc. at additional cost for CDM initiatives should be encouraged by the company.

It is therefore required that all such projects are identified and are put up to me for approval so that the company can go ahead with the CDM initiatives steps taken by the company.
