<p>Other issue: Compared to emission reductions estimated in the PDD, 19.5% higher emission reductions are claimed during the monitoring period. This would appear due to higher net electricity supplied to the grid during the monitoring period. The average monthly electricity exported during the monitoring period is 5.62 GWh. However the PDD, for the purpose of investment analysis used monthly average electricity of 4.70 GWh. Clarification is required.</p>
