

## REVIEW OF THE PROJECT ACTIVITY

### Fuel switch at BSM sugar mills (1022)

At its thirty-fourth meeting the Board agreed to register the project activity if the project participant and the DOE submit a revised PDD and a corresponding revised validation report which clearly demonstrate that the applicability requirements of AM0036 have been met by the project activity, “if power is generated with heat from the boilers, it is not increased as a result of the project activity, i.e: (a) site, the power generation capacity installed remains unchanged due to the implementation of the project activity and this power generation capacity is maintained at the pre-project level throughout the crediting period; and (b) the annual power generation during the crediting period is not more than 10% larger than the highest annual power generation in the most recent three years prior to the implementation of the project activity”.

At its thirty-sixth meeting the Board could not register the project activity submitted for registration by the DOE (DNV Certification AS), considering that the project participant and DOE failed to demonstrate that the annual electricity generation of the project activity increases by not more than 10% of the historical highest annual generation; the approved methodology AM0036 is therefore not applicable to the project activity.
