

## REVIEW OF THE PROJECT ACTIVITY

### **“The model project for renovation to increase the efficient use of energy in brewery” (1516)**

At its forty-sixth meeting the Board could not register the project activity “The model project for renovation to increase the efficient use of energy in brewery”(1516), submitted for registration by the DOE (DNV), because the DOE and project participant failed to substantiate that the emission reductions calculations are in line with the methodology, as the discount emission factor of 10% to the *ex-ante* baseline emissions, which was proposed by the project participants, is not in line with the methodology’s requirements. The Board further noted that the historical data used to calculate the baseline emissions was not provided either in response to the request for review or the review.
