

REVIEW OF THE PROJECT ACTIVITY

"Emission reductions through partial substitution of fossil fuel with alternative fuels in three cement plants of Holcim Philippines Inc" (1806)

"Emission reductions through partial substitution of fossil fuel with alternative fuels in three cement plants of Holcim Philippines Inc" (1806) as the DOE(DNV) failed to submit the requested corrections within the 12 weeks deadline required by the "Clarifications to facilitate the implementation of the Procedures for review". The corrected documentation was submitted 22 weeks after the request was sent to the DOE. The Board does not consider that the suspension of this DOE at the forty-fourth meeting of the Board is a sufficient reason for delay in submitting the requested corrections as the terms of the suspension expressly allowed the DOE to continue with this process. Furthermore the Board did not consider that the revised validation report explained what additional validation activities the DOE had undertaken after the review of this request for registration was completed at the forty-fourth meeting of the Board.
