Please indicate reasons for the request for review and attach any supporting documentation to this request form. (if space is not sufficient please attach further reasons)	
<p>Reasons for request:</p> <p>The monitoring was not conducted in accordance with the registered monitoring plan. The net electricity generation should be calculated as the difference of metered generation at each wind turbine and auxiliary consumption and losses, rather than from the meter readings at the export point. Although the DOE has identified the reporting of electricity generation from the export point as a notational error and accepted the revised monitoring report on the basis of correction of the notations used, it should also address the source of data.</p> <p>Minor issue:</p> <p>QA/QC procedures are not appropriately developed in the PDD and in monitoring report. The PDD states that the development of QA/QC procedures is planned, but nothing is said about when it will be ready.</p>
