

Reasons for request 1,2 and their clarification are provided in the table below:

<p>1.</p>	<p>The DOE is requested to further clarify on its statement "that all four boilers were not in operation during the monitoring period under consideration..."(p.8 verification report), and if all four boilers were not in operation, how the DOE verified the source of electricity generation in this monitoring period.</p>
<p>Reply from PP</p>	<p>In the project activity, PP had proposed power generation from steam generated in 4 Nos. of waste heat recovery boilers. The boilers were commissioned and put in line in a phased manner.</p> <p>The commissioning¹ date of all the 4 Nos. Waste Heat Recovery Boilers are given below:</p> <p>Boiler 1 : 03/11/07 Boiler 2 : 03/11/07 Boiler 3 : 15/01/08 Boiler 4 : 20/09/08</p> <p>The current monitoring period under verification is from 31/12/2007 – 31/03/2008. During this period only 3 Nos. boilers were operational as indicated by the commissioning dates.</p> <p>The source of electricity generation during this period was from these three waste heat recovery boilers only.</p>
<p>2.</p>	<p>Clarification is required on whether there was any heat or energy source used for power generation other than the waste heat.</p>
<p>Reply from PP</p>	<p>The only source of power generation other than the WHRB based power generation is on site DG set. In the monitoring report project emissions on account of diesel consumption in the DG set has already been accounted for.</p>
