Opening Inventory - 45.45 t
 Closing Inventory - 0
 Total Consumption - 45.45

Measured Consumption - 171 t
 Calculated Consumption - 181 t

Mineral Oil Suppliers

The following document describes the switching stages from HFO to Mineral oil in the oiling process - plants 42 & 50.

In Jan-2006 (Page 1), the plant was making its first use of the Mineral oil while still using large amounts of HFO for oiling.

In Feb-2006 (Page 2), the plant was using both HFO and Mineral oil in the oiling process.

In March 2006 (Page 3), the plant stopped using HFO for oiling and began operating using Mineral oil only.
