

**REVIEW OF THE PROJECT ACTIVITY****“Bromine Compounds Fuel-Switch Project” (2237)**

“Bromine Compounds Fuel-Switch Project” (2237) submitted for registration by the DOE (SGS) because the DOE and the project participant failed to demonstrate additionality of the project activity, in particular that the barriers due to uncertainty in fuel supply or investment will prevent the implementation of the project activity and the price differential between the HFO and the NG is not the main driver to implement the project activity.
