

**REVIEW OF THE PROJECT ACTIVITY****"Dead Sea Magnesium (DSM) Fuel-Switch Project" (2248)**

"Dead Sea Magnesium (DSM) Fuel-Switch Project" (2248) submitted for registration by the DOE (SGS) because the DOE and the project participant failed to: (i) substantiate the baseline of the project activity; and (ii) demonstrate additionality of the project activity, in particular that the barriers due to uncertainty in fuel supply or investment will prevent the implementation of the project activity and the price differential between the HFO and the NG is not the main driver to implement the project activity.
