

**Annex 34****Registration****Scope of the review on
“Biogas recovery and Thermal Power production at CITRUSVIL Citric Plant in Tucumán,
Argentina” (3192)**

1. The Board agreed to undertake a review of a project activity “Biogas recovery and Thermal Power production at CITRUSVIL Citric Plant in Tucumán, Argentina” (3192).
2. The Board agreed that the scope of the review relating to issues associated with validation requirements shall cover a review of the:
 - (a) Applicability of the methodology, in particular:
 - (i) Whether the project activity involved a change of equipment;
 - (ii) Whether the open anaerobic lagoons in the baseline scenario are in compliance with existing regulation and hence the most plausible baseline scenario for the project activity; and
 - (iii) Whether that same baseline wastewater treatment system applies to the additional methane generation resulting from the stated increase in production and consequent change of equipment, in line with the requirements of the methodology and the General Guidance for SSC methodologies (EB 41, Annex 20, para. 16); and
 - (b) Application of the methodology, in particular, why the 10-day measurement campaign was conducted for the project scenario (i.e., with the anaerobic bio-digester) and not for the baseline scenario (open anaerobic lagoons).
