

**Annex 38****Registration****Scope of the review on
“Energy efficient power generation in Tirora, India” (3225)**

1. The Board agreed to undertake a review of a project activity “Energy efficient power generation in Tirora, India” (3225).
2. The Board agreed that the scope of the review relating to issues associated with validation requirements shall cover a review to determine:
 - (a) The additionality of the project activity through an assessment of :
 - (i) Whether the PP has submitted the levelized tariff of power generation with the assumption of the CDM revenues, and if so, the DOE should demonstrate that by using the levelized tariff of power generation without consideration of the CDM revenue, the project activity is not the baseline scenario and therefore additional; and
 - (ii) Suitability of the input values applied in the calculation of the levelised tariff of power generation for each plausible alternative in accordance with paragraph 109 of VVM v1, in particular, specific investment considered given that the project activity has significantly higher specific investment and the baseline alternative has significantly lower specific investment compared to similar CDM projects, return on equity given that the project activity is commissioned through competitive bidding process, and the suitability of the price of coal; and
 - (b) The application of the methodology through an assessment of:
 - (i) Suitability of the identified spatial extent of the project boundary (NEWNE grid system of India) given that the baseline grid emission factor has been calculated using all power plants in national grid system of India; and
 - (ii) The suitability of the emission reduction calculation in line with the clarification by Meth Panel, AM_CLA_0173.

Project 3225	EB 56, Annex 38, 17 September 2010	Decision Class: Ruling Document Type: Scope of Review Business Function: Registration
