<ol style="list-style-type: none"> 1. The amount of rice husks generated was not measured but calculated. However, the monitoring plan requires the measurement of this parameter. Further clarification is required on how the DOE verified the amount of rice husks generated. 2. The emission reduction calculation is based on the gross rather than the net electricity generation. Further clarification is required on how the DOE verified the calculation of emission reduction. 3. The third electricity measure system (M3) as one of the supplementary electronic measurers was not installed in this monitoring period. However the monitoring plan requires "two supplementary conventional electronic measurers should be installed". Further clarification is required on how the DOE verified this requirement has been met. 4. The monitoring plan requires the reported amount of biomass combusted to be double checked with the electricity production and efficiency. However neither the monitoring plan nor the verification report stated this requirement has been met. Further clarification is required on how the DOE verified this requirement has been met.
