<ol style="list-style-type: none"> 1. The monitoring report is not in accordance with the methodology. Parameters required by the approved methodology including the flow rate of the biogas extracted by digester, the methane percentage in the biogas and flare efficiency were not monitored by the project participant. Further clarification is required on how DOE verified the monitoring is in accordance with AM0016 version 3. 2. The PPD should indicate whether there is any current or future plan to measure the methane content in the exhaust gas after the flaring process, as mentioned in the validated PDD. 3. The title of the table on page 12 of the Monitoring Report shall be corrected as it should refer to “project emission reductions,” and not merely—and mistakenly— to “project emissions,” as currently written.
