<p>The DOE verified that the methane content in the biogas was calculated based on the CO₂ measurements. Although this approach was stated in the PDD, it is not in accordance with the registered monitoring plan and the methodology which require the methane content to be measured. The PP/DOE should explain why the indirect measurement of methane through the use of an Orsat analysis would be accurate, taking into account that also other inert gasses (e.g. nitrogen) could be detected as if being methane.</p>
