

REVIEW OF THE PROJECT ACTIVITY

“Optimum utilization of clinker for Pozzolana Portland Cement (PPC) production at Birla Plus Cement in Bathinda, Punjab, India” (0863)

The Board agreed to reject the project activity “Optimum utilization of clinker for Pozzolana Portland Cement (PPC) production at Birla Plus Cement in Bathinda, Punjab, India” (0863), submitted for registration by the DOE (TUEV-SUED), because the project activity does not meet the additionality requirements of paragraphs 43 to 52 of the CDM modalities and procedures because the DOE and project participant failed to substantiate significant and additional technological and market acceptability barriers to increasing the level of additives in the production of blended cement above the baseline level.
