

REVIEW OF THE PROJECT ACTIVITY

Increase of Power Generation of the hydroelectric power station Fortuna in Panama (IPGFP) (0871)

The Board agreed to reject the project activity submitted for registration by the DOE (TÜV-SÜD) because the project participant and the DOE failed to substantiate:

- (i) How the baseline has been calculated using the scenario that involves a modification or retrofit to an existing electricity generation facility and
- (ii) That this will be monitored in accordance with the selected approved methodology.
