Sub. : Clean Development Mechanism (CDM) Benefits

Dear Sir,

As you are aware that we have decided to install Vacuum Pre-concentrator in both the unit of Urea Plant, which will lead to reduction in consumption of steam at Urea plant & consequences energy saving .

Clean Development Mechanism (CDM) under Kyoto Protocol is applicable to developing countries like India. CDM is a novel mechanism to reduce global carbon-di-oxide emissions and thus abating global warming.

Since Indo Gulf is an energy conscious company, it may kindly be noted that Vacuum Pre-concentrator project can be considered as CDM project under Kyoto Protocol , which may give benefit the company.

Kind Regards

Anand K. Gupta
Manager (Process Engg.)
