

**Annex 27****Registration****Scope of the review on  
“Ningxia Rujigou Coal Mine Methane Power Generation Project” (3130)**

1. The Board agreed to undertake a review of a project activity “Ningxia Rujigou Coal Mine Methane Power Generation Project” (3130).
2. The Board agreed that the scope of the review relating to issues associated with validation requirements shall cover a review to assess the application of the baseline methodology, ACM0008 v5, through an assessment of the appropriateness of the identified baseline scenario, in particular:
  - (a) How the DOE has validated that the venting of high CH<sub>4</sub> concentration CMM, which has to be either used or destroyed as per the Emission Standard of Coalbed Methane/Coal Mine Gas (GB 21522-2008), is not systematically enforced and that non-compliance with those is widespread in the country;
  - (b) The elimination of flaring and feeding CMM to the gas pipeline alternatives as the DOE has not substantiated the list of references provided; and
  - (c) The elimination of captive power generation as the DOE has not referred to this alternative and its elimination.
