

Final Ruling Regarding the Request for Registration of

“Reduction in specific energy consumption ratio by installation of energy efficient direct melt technology in PET film manufacturing unit at, Uttaranchal, India” (3852)

The CDM-Executive Board decided to reject the above proposed project activity on 7th April 2011 in accordance with “*Procedures for review of requests for registration*”, version 1.2, EB 55, Annex 40, paragraphs 20 and 28 (the procedures). In accordance with paragraph 27 of the procedures, the ruling shall contain an explanation of the reasons and rationale for the final decision which are as follows:

- The PP/DOE have failed to correctly apply paragraphs 2 and 10 of methodology AMS I.I.D. version 11 (the methodology), as the energy savings from the project activity has not been directly measured and monitored. No deviation from the requirements of the methodology was requested.
- Paragraphs 2 and 10 of the methodology states that: *"This category is applicable to project activities where it is possible to directly measure and record the energy use within the project boundary"* and *"In the case of a new facility, monitoring shall consist of: (a) Metering the energy use of the equipment installed; (b) Calculating the energy savings due to the equipment installed"*.
- However the only monitored parameter mentioned in the validation report (section 4.5.2) is the "Extrusion quantity for BOPET films per annum" without any further reference to direct measurements of energy use within the project boundary.
- This alternative approach to measure the energy saving is not in line with the methodology, which requires the direct measurement and recording of energy use within the project boundary.

Please note, however, that, with appropriate revisions, this project activity may be resubmitted for validation and registration provided it meets the requirements for validation and registration, in accordance with paragraph 42 of the CDM Modalities and Procedures (Decision 3/CMP.1).
