OUTLET

• Intended Nationally Determined Contribution of Georgia;

• Emissions’ Trend for Georgia;

• Institutional Arrangement;

• Sector Coverage;

• Conclusions
“Economic growth will be accompanied by increase in GHG emissions (if no efforts are made to reduce GHG emissions associated). Therefore, it is important to undertake efforts to substantially limit this increase by boosting investments in low carbon technologies throughout the country.”

SECTOR COVERAGE

ENERGY

INDUSTRIAL PROCESSES

AGRICULTURE

WASTE

Fugitive Emissions
Transport Emissions
Emissions from Cement Production
Etc.
CONCLUSIONS

CDM is something already used only financial mechanism in Georgia;

CDM methodology synergy with other mitigation tools;

CDM mostly needs to be simplified and updated;

CDM’s ability to allow countries to increase their level of private sector engagement;

Countries with an emission reduction obligation under the Protocol can use the mechanism for fulfilling the mitigation goals;

CDM should take into consideration the INDC targets as well.
