

SUPPRESSED DEMAND

Practitioners Workshop on CDM Standards

Bonn, Germany

8 - 10 June 2011

UNFCCC Secretariat

SDM programme

KEY ISSUES FOR THE SUPPRESSED DEMAND

- 1. The definition of the appropriate level of service the baseline would provide in case the pre project scenario is the baseline scenario.**
- 2. The identification of the baseline for a service that was not or was provided at a much lower level under the pre project scenario in case it is considered that the pre project scenario should not be considered as baseline (no emissions).**
- 3. Objective criteria to distinguish the two.**
