

Comments on Guidelines for completing the project design document (CDM-PDD), and the proposed new baseline and monitoring methodologies (CDM-NM)

I would like to thank the secretariat and all experts contributed in preparation of Version 07 of the guidelines;

The updated version of the guidelines is comprehensive and will be useful for relevant experts working in CDM field *inter alia*; DNAs; consultants; DOEs; carbon traders and carbon funds.

I have some (minor) remarks; from the point of view of a DNA of developing country

- Conformity with sustainable development criteria is an important issue for DNA in developing country; I think it needs to have more explanation for more in-depth understanding
- I suggest; for future planning; to design a template wizard that guide PDD writer stepwise ending with auto creation of the PDD
