

## **Comments on Clean Development Mechanism Validation and Verification Manual (CDM-VVM)**

Actually, I found the manual very comprehensive, I would like to thank the Secretariat, the CDM Executive Board, the Accreditation Panel and all involved expertise in preparation of the manual;

I have few (minor) comments, that you may find it valuable. I wish I could find in V&V manual some important common used parts such as;

- Flow chart/s for validation, verification and on-sight assessment processes, where following a chart makes it easy to enhance the processes and assure of completion the requested steps
- Include in the same manual (as index) a list of documents that are used in validation and verification processes of a CDM project
- Also; include a list of terminologies (as index)
- Try to provide the manual in all UN languages

Thank you.
