**Re: Call for Public Inputs on "project and leakage emissions from anaerobic digesters"**

Dear Sir/Madam,

I am thankful to UNFCCC for providing opportunity to give my input on draft methodological tool "Project and leakage emissions from anaerobic digesters". I will be happy if my input will be considered during the preparation of an information note by the secretariat and be taken into account by the Board in its future meetings.

Here is my comment:

Data and Parameters Not Monitored: Quantity of methane produced in the anaerobic digester in year  $y$  (t CH<sub>4</sub>)

Queries: Why a default value of Volumetric Fraction of CH<sub>4</sub> is ( $f_{\text{CH}_4, \text{default}}$ ) used when quantity of CH<sub>4</sub> generation from different waste composition> In addition to this, methane in gas mixture can be quantified using gas chromatography or other methodology.

Suggestion: It should be monitored parameter.
