**DRAFT GUIDELINES FOR QUALITY ASSURANCE AND QUALITY CONTROL
OF DATA USED IN THE ESTABLISHMENT OF STANDARDIZED BASELINES**

Call for Input Comments:

Page 3; 11.c Consistency: recommend that the same method of calculation is used. Can this be predetermined and set out in detail? There is a reference in (g) that there should be no room for assumptions or differing interpretations - this should also be in (c)

Page 7; 27.f states that the use of a spreadsheet is preferred and the formulae described. Suggest that an automated systems is recommended as robust and controlled with a spreadsheet as a second choice.
