

Call for inputs on the validation process

The implementation of local stakeholder consultation and global stakeholder consultation shall offer an opportunity for comments during the whole validation process instead of short period, i.e. 30/45 days. As most of PDDs published for GSC are lack of information, it is important to have stakeholders' input at later time in order to ensure the credibility that projects do need CDM revenue for implementation. Validating DOEs shall give assessment opinions with an impartial manner by checking key evidence which is finally verified to confirm the project additionality and other supporting evidence in response to stakeholders' comments before registration. The evidence shall be published for supervision.
