Re.: Co2_Negative emissions reduction

Dear Mr. Lanseros,

On behalf of the Chair of the CDM Executive Board, I would like to thank you for your letter of 23 July 2013, presenting your concerns and suggestion regarding provisions found in specific CDM methodologies which may result in “negative emission reductions”. Your letter has been made available to the Board.

I would like to inform you that the secretariat will initiate revisions to the approved consolidated methodology ACM0003 (Emissions reduction through partial substitution of fossil fuels with alternative fuels or less carbon intensive fuels in cement or quicklime manufacture). The issues and suggestions listed in your submission will be taken into account when revising the methodology. A call for input on the revision of this methodology will be launched. The secretariat welcomes additional suggestions provided in the frame of calls for input.

Finally, I would also like to inform you that the UNFCCC website offers the possibility to directly provide comments on each of the approved CDM methodologies.

Thank you once again for contacting the Board with your concerns and suggestions.

Yours sincerely,

Andrew Howard
Secretary to the CDM Executive Board
