SB Workshop – Issues & Barriers

- Availability of required data with DNAs of the parties.
- More clarity on the time periods for which data need to be reported and criteria for documentation and verification of provided data is required.
- Further guideline on determination of baseline emission intensities for fuels and technologies is required.
- Appropriate guideline for establishing benchmarks made on emissions per output , where outputs have different qualities.
- Applicability of this guideline for retrofit projects is to be confirmed .
- Further clarity on calculation of the cost per unit of output in a standardised fashion where costing is plant or location specific.
- Needs guidance to DNAs for deciding on the levels of x and y is required . Further How frequently should these be revised?
- How the data confidentiality issue, if any, will be addressed.
- Further guideline for LDCs is required where no data is available or no capacity is available to regularly update the data sets used under the developed SB.

SB Workshop – Opportunities & Way Forward

- ❑ SB will help to improve CDM penetration in under represented countries with appropriate initiatives and help of secretariat
- ❑ Guideline needs to include guidance on data collection procedure for DNAs needs to provide required technical (and if required financial) support to DNAs (LDCs) for data collection
- ❑ Secretariat needs to invest on capacity development of the DNAs for new SB assessment and approval
- ❑ Secretariat assistance is also required by DNAs for technical assessment of the SB submitted by the private / government project entity.
- ❑ In view of high applicability, following potential sectors should be considered on high priority for SB development
 - Waste Management – Landfill and composting
 - Grid based electricity generation (RE and FF based)
 - Transport projects
- ❑ Secretariat should develop SB on behalf of few parties, for at least couple of few most common project types
