

## **First Stakeholders Meeting Notes on the Feasibility study of institutional cook stoves SBL**

The meeting was held on Tuesday, 19<sup>th</sup> May 2014 at GIZ Boardroom. The attendance list is attached in annex 1.

### **Introductory remarks:**

1. Meeting started at 9:30am with welcoming remarks by Inna Hommes and Gloria Namande from GIZ (Hosts), thanking all the stakeholders for turning up in good numbers.
2. Introductions followed
3. The consultant was called to make the presentation of the draft feasibility study of the SBL.
4. The consultant encouraged the stakeholders to interject with clarifications/additions
5. The consultant provided a brief introduction into the SBL subject, indicating the advantages

### **Main key areas of concern which were highlighted by the stakeholders include;**

- The stakeholders pointed out the limitation in the reference to institutions as used in the title – it was argued that reference to institutions will eliminate very many who do not fall into this category;
- A definition of institutional cook stove was sought – the consultant responded that the definition is based on GIZ's of any cooking for more than 50 people;
- Another definition was implied – the one by Global Alliance on Clean Cook Stoves (GACC) – an institutional cook stove is any cooking above 20L. This was found to be almost the same definition as GIZ since for every person, 0.5L size of stove is considered;
- The stakeholders expressed the concern that the SB development should not be limiting. As such, other institutions (apart from schools) like Hospitals, prisons and small scale enterprises play Key in market support for the private sector;
- The consultant advised that he discussed the option of including all the institutions with the UNFCCC staff in Bonn, the ones responsible for reviewing

and approving the SBL. Their opinion was that the SBL should be developed for schools as the sub-sector will show similar pattern of behavior. They argued that expanding to include all other institutions can be done at a later stage;

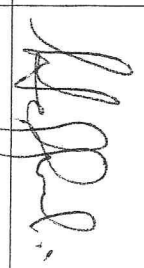

- The stakeholders indicated that some have new reports expected to come out in the next couple of days/weeks. Among these include the ERT report from UBOS, GVEP indicated that they have carried out stoves tests that they were willing to share, CREEP also indicated that they are willing to share provided a NDA was signed. (CREEP to be followed by GIZ). The consultant to follow up with the rest;
- It was indicated that a robust evidence of data is required in compliance with UNFCCC requirements. The consultant indicated to the meeting that the available literature with its inadequacy in regard to complying with the UNFCCC requirement was discussed with UNFCCC , and that they are aware;
- The need for a biomass consumption monitoring and evaluation of the IICS in institutions – concerns about seasonal variations etc were discussed. The stakeholders could not resolve how this should be addressed in case the survey was required.

#### **Final Remarks:**

- Spot check approach was recommended to give more credibility to the existing data;
- Most of the present stakeholders promised their full support in building a strong SBL;
- GVEP representative promised to send a report on recent stove efficiency tests that had been carried;
- The UGA-Stove representative promised to send information on biomass consumption in schools and barracks;
- BEETA representative promised to send information from member cook stoves manufacturers on the number of IICS distributed so far in the different regions in Uganda; and
- UBOS – indicated that the ERT report is in print and would be available publicly.

## **Annex 1 – Attendance List**

**Presentation of Preliminary Findings From a Feasibility Study on the Promotion Of Institutional Cook Stoves Standardized Baseline for Uganda – 20<sup>th</sup> May 2014, In Board Room A417**
