**Subject:** The Korean DNA's submission of proposed specific renewable energy technologies for automatic additionality of micro-scale projects

Dear The Secretariat,

First of all, we would like to thank you for all your efforts to promote CDM project activities worldwide.

According to the criteria 2(d) of “Guidelines for Demonstrating Additionality of Micro-scale Project Activities”, project activities employing specific renewable energy technologies/measures recommended by the host country DNA and adopted by the CDM Executive Board are deemed to be additional under the condition that the total installed capacity of the technology/measure contributes less than or equal to 3% to national annual electricity generation. From the guidance, we hereby submit the attached documents (Attachment 1 ~4) concerning the Korean DNA's submission of proposed specific renewable energy technologies for automatic additionality of micro-scale projects

The used data is a most recent available(IEA/OECD) and data on the percentage of contributions of specific renewable energy technologies in the total installed grid connected power generation capacity in our country is 1.739%.

Thank you for your attention and consideration.

Sincerely yours,

DNA, Republic of Korea
