Re.: Clarification regarding the Simplified procedures to identify the baseline scenario and demonstrate additionality

Dear Mr. Sprovieri,

I would like to thank you for your communication of 17 February 2017, regarding the simplified procedures to identify the baseline scenario and demonstrate additionality in the approved methodology ACM0001 version 17.0. Your communication has been made available to the CDM Executive Board (the Board) in accordance with the relevant provision of the procedure for direct communication with stakeholders.¹

Please be informed that the “simplified procedures” referred to in paragraph 21 of methodology ACM0001 version 17.0 cover cases of switching from a simple flaring of landfill gas to the use of this gas for power generation of 5 MW, but can currently not be used, as the procedures were valid up to 7 November 2016. Also please note that paragraph 21 of methodology ACM0001 version 17.0, is to be read in conjunction with paragraph 20.

Further, we would like to inform you that an extension of these provisions is likely to be considered during the next meeting of the Methodologies Panel (20-24 March 2017) and at the subsequent meeting of the Board (2-5 May 2017). You may therefore wish to follow the proceedings of these meetings for updates on the issue.² Alternatively you could choose the option 5.3.2 procedures according to the “Combined tool to identify the baseline scenario and demonstrate additionality” in the methodology to proceed with the post registration change.

Thank you for contacting the Board with your request.

Yours sincerely,

Rajesh Sethi
Secretary to the CDM Executive Board
