RCC	Regional Collaboration Centre of the UNFCCC
SB	Standardized Baseline
SPEC	Strategic Planning and Environmental Committee
UNFCCC	United Nations Framework Convention on Climate Change
WAPP	West African Power Pool

1. INTRODUCTION

The West African Power Pool (WAPP) was created in 1999 through Decision A/DEC.5/12/99 of the Authority of the ECOWAS Heads of State and Government and established in 2006 through Decisions A/DEC.18/01/06 and A/DEC.20/01/06 as a Specialized Institution of ECOWAS. The WAPP integrates the national power systems into a unified regional electricity market and promotes trade of electricity among the ECOWAS member States. Currently nine (9#) countries (Benin, Burkina Faso, Côte d'Ivoire, Ghana, Mali, Niger, Nigeria, Senegal and Togo) are interconnected and construction is ongoing to interconnect the remaining mainland ECOWAS countries namely Sierra Leone, Liberia, Guinea, Guinea Bissau and The Gambia.

The WAPP member utilities comprise of ONEE (Morocco), VRA (Ghana), TCN (Nigeria), SONABEL (Burkina Faso), SOGEM (Mali), Senelec (Senegal), SBEE (Benin), NIGELEC (Niger), NAWEC (Gambia), MAINSTREAM ENERGY (Nigeria), LEC (Liberia), KARPOWERSHIP (Ghana), GRIDCO (Ghana), EDSA (Sierra Leone), EDM-SA (Mali), ECG (Ghana), CONTOURGLOBAL (Togo), CI-ENERGIES (Cote d'Ivoire), CIE (Cote d'Ivoire), CENPOWER (Ghana), CENIT (Ghana), CEET (Togo), CEB (Benin), EDG (Guinea), EAGB (Guinea Bissau), NEDCO (Ghana), SUNON ASOGLI (Ghana), NORTH SOUTH POWER (Nigeria), PACIFIC ENERGY (Nigeria), SAHARA POWER (Nigeria), PARAS ENERGY (Nigeria), AKSA ENERGY (Ghana), SAPELE POWER (Nigeria), APR ENERGY (Senegal), TRANSCORP POWER (Nigeria), CUMMIN POWER (Nigeria). The members are grouped into five Organisational Committees namely the Strategic Planning and Environmental Committee (SPEC), Engineering and Operations Committee (EOC), Finance Committee (FC), the Human Resource and Governance Committee (HRGC) and the Distribution and Commercial Committee (DCC).

The WAPP, in collaboration with UNEP RISOE, developed a Grid Emission Factor (GEF)[1] Standardized Baseline (SB) for the regional power sector which was approved on 27th February 2017 as "ASB0034: Grid emission factor for West African Power Pool". The SB is envisaged to expire on February 26, 2021 after a one-year extension of original validity period approved by the Executive Board of UNFCCC.

Currently, within the framework of updating the SBL, the WAPP Secretariat is supported by the World Bank, who conducted analyses towards preparation of the GEF Analysis Report, and the Regional Collaboration Centre (RCC) Lomé of the United Nation Framework Convention on Climate Change (UNFCCC), hosted by the Banque Ouest Africaine de Développement (BOAD).

This study findings shall allow for the update of the Approved Standardized Baseline ASB0034, which was approved by the Clean Development Mechanism (CDM) Executive Board in 2017. The calculation of the current GEF is based on (i) the most recent version of UNFCCC's Tool for calculating the emission factor for an electricity system (Version 7.0, hereafter referred to as the "tool"), and (ii) the data collection excel file developed by the Institute for Global Environmental Strategies (IGES) for the calculation of the Grid Emission Factor (GEF).

1.1. THE BENEFITS OF A REGIONAL GRID EMISSION FACTOR

The WAPP Regional GEF serves as an important stepping-stone for structuring climate investments and carbon payments for energy sector projects. The regional GEF also has the potential to reduce project costs while facilitating access to carbon finance. The absence of a regional GEF will negatively impact registered CDM projects during the monitoring and verification of results.

[1] GEF refers to the specific CO_2-intensity of a power system, expressed in tCO2/MWh

1.2. Scope and Objective

The concept of the GEF Standardized Baseline (SB) was developed under the UNFCCC's CDM, as an instrument to standardize GHG emission estimation. Against this background, the WAPP, with support from the German Federal Ministry for the Environment, developed a regional GEF that was approved and published by the UNFCCC in February 2017. The approved and existing GEF features the following scope: (i) Valid for the interconnected ECOWAS countries comprising of Benin, Burkina Faso, Côte d'Ivoire, Ghana, Mali, Niger, Nigeria, Senegal, and Togo; (ii) Can be used to estimate the emission reductions for grid-connected, renewable electricity generation and for grid-connected energy efficiency measures; (ii) Valid until 26 February 2021.

Against this background, the overall objective of this assignment is to update the regional GEF before its expiration on 26 February 2021 based on 2017 to 2019 data vintage.

1.3. Data Collection and Analysis

During the inception phase, the WAPP Secretariat organized from September 17 to 18, 2020 a meeting of the WAPP SPEC, with participation of the WAPP EOC among others, to kick-off of the assignment. During the Kick-off Meeting, the WAPP member utilities agreed on a data collection schedule for the data collection exercise. The outcome of the meeting was adopted by all participants including the DNAs that also participated in the Meeting. The WAPP Secretariat then conducted bilateral meeting and data collection exercise with all WAPP member utilities. For utilities which are not members of the WAPP, a secondary source data were obtained from the Electricity Sector Regulatory Bodies. The data was provided by:

- Cenpower Generation Company Limited (Ghana)
- Côte d'Ivoire Energies (Côte d'Ivoire)
- Communauté Electrique du Benin (Benin, Togo)
- Compagnie Ivoirienne d'Electricité (Côte d'Ivoire),
- Energie du Mali - SA (EDM-SA),
- Electricity Distribution and Supply Authority (Sierra Leone)
- Ghana Grid Company Limited (Ghana)
- Cenit Energy Limited (Ghana)
- Ghana Energy Commission (Ghana)
- Liberia Electricity Corporation (Liberia)
- Energy Commission of Nigeria (Nigeria)
- Société Nigérienne d'Electricité (Niger)
- Paras Energy & Natural Resources Development Limited (Nigeria)
- Mainstream Energy Solution (Nigeria)
- Transmission Company of Nigeria (Nigeria)
- Société Beninoise d'Energie Electrique (Benin)
- Société de Gestion de l'Energie de Manantali (OMVS)
- Société Nationale d'Electricité du Burkina (Burkina Faso)
- Société Nationale d'Electricité du Sénégal (Senegal)
- Volta River Authority (Ghana).
- Niger Delta power holding company

Without the commitment of WAPP member utilities to effectively share their operational data, this analysis would not have been possible. The Designated National Authorities (DNA) also participated actively in this process. Some DNAs participated in the WAPP meetings. Equally, the RCC organized a series of individual consultations with DNAs to discuss the data collection and submission process. DNAs also engaged with national stakeholders to close data gaps.

2. Calculating the WAPP Grid Emission Factor

The following section describes the steps used for the calculation of the WAPP GEF:

STEP 1. Identify the Relevant Electricity Systems

The WAPP comprises nine interconnected countries: Benin, Burkina Faso, Côte d'Ivoire, Ghana, Mali, Niger, Nigeria, Senegal and Togo. Currently transmission lines connecting Guinea, Liberia and Sierra Leone are being built (Figure 1).

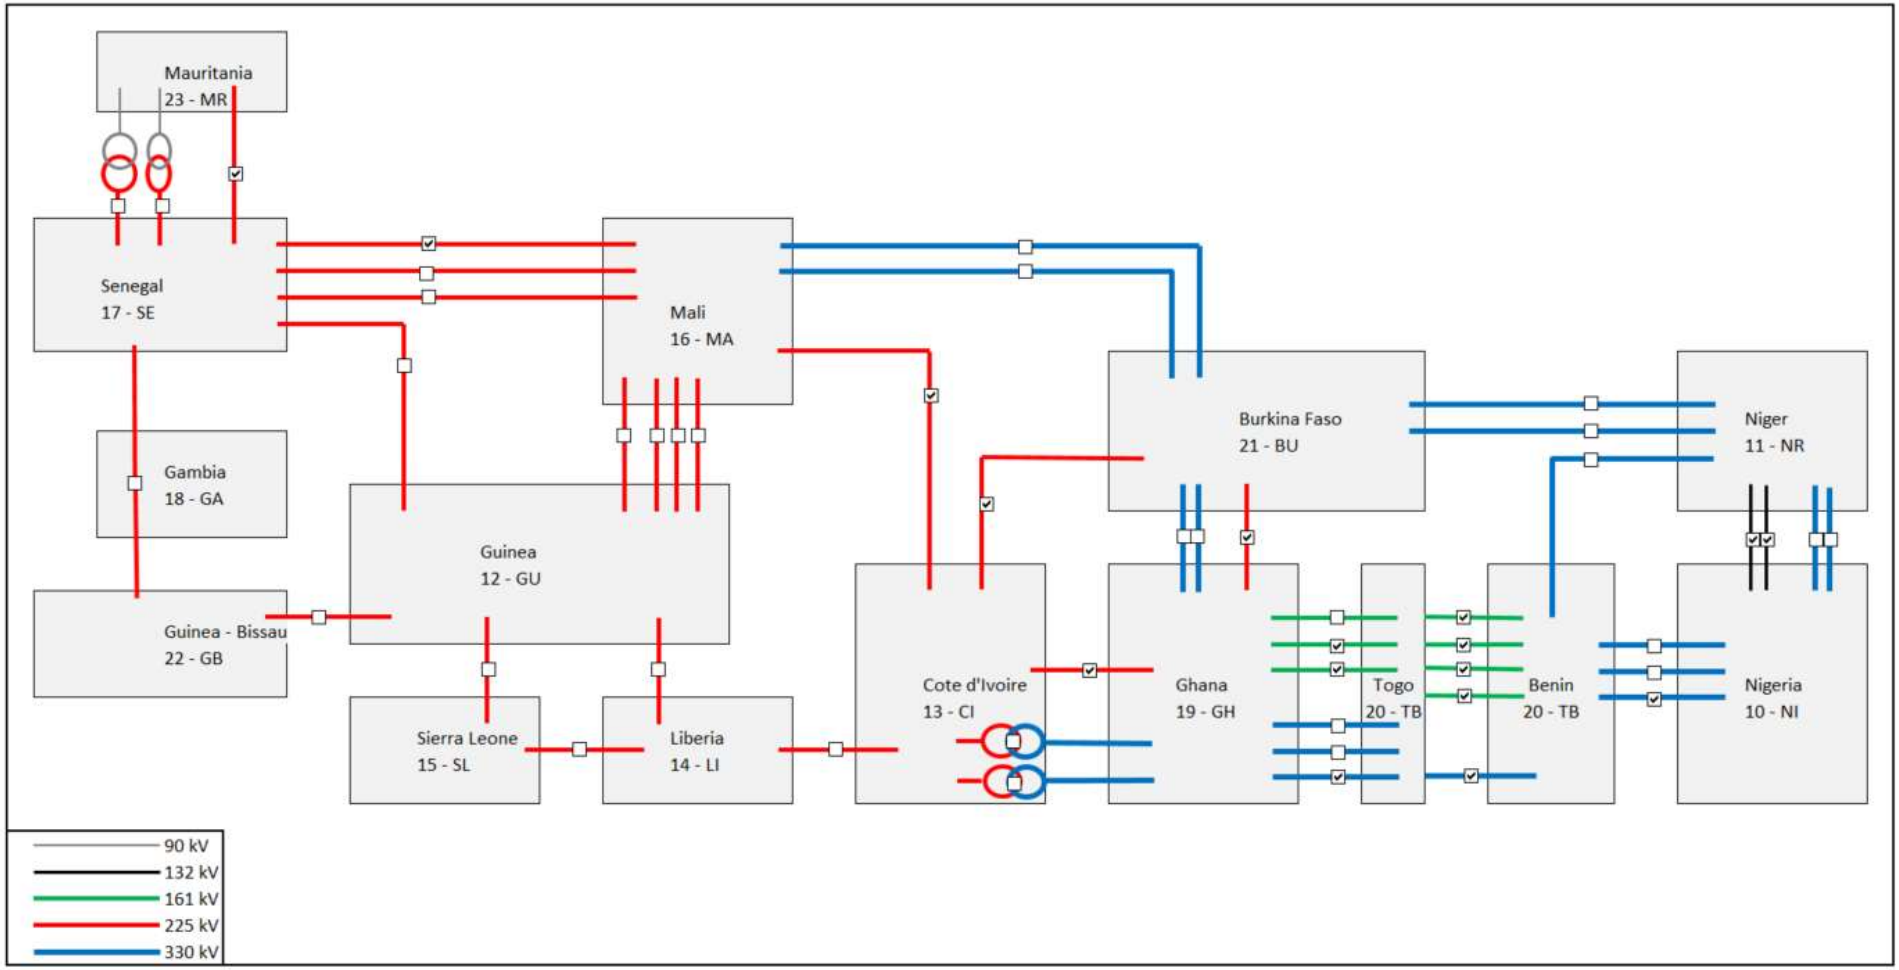
The interconnected countries feature transmission lines allowing for substantial electricity trades between their national power companies as well as between Independent Power Producers. Given this setup, the Project Electricity System (PES) is defined as the electricity grid shared by the nine (9#) member countries (Fig 1 refers).

The Build Margin (BM), the Operating Margin (OM) as well as the resulting Combined Margin (CM) are determined for the joint PES. This is consistent with general guidance of the CDM executive Board on regional electricity systems (CDM EB 28, §14) and with the current version of the tool.

Tool 7 §17a (Option 1) enables DNAs to decide on the spatial scope of the PES. In line with the technical scope of the WAPP transmission system, the DNAs decide that the PES comprises all interconnected WAPP member countries.

Liberia, Sierra Leone and Guinea expressed their interest to join the regional GEF, once the tie lines are commissioned.

Figure 1: Current and planned Transmission Line Design Capacities in West Africa



Source: WAPP Secretariat

STEP 2. CHOOSE WHETHER TO INCLUDE OFF-GRID POWER PLANTS

The tool offers two options to calculate the OM and BM emission factor:

- Option I: Only grid power plants are included in the calculation;
- Option II: Both grid power plants and off-grid power plants are included in the calculation.

The project participant may choose whether to include off-grid emissions. After careful evaluation, it was decided not to consider off-grid emissions and Option I was chosen.

STEP 3. SELECT A METHOD TO DETERMINE THE OPERATING MARGIN

The calculation of the operating margin emission factor ($EF_{grid,OM,y}$) is based on the simple OM approach as per Figure 2 of the tool. This section shows the share of Low-Cost/Must-Runs (MR) is below 50% and therefore, the simple OM method is applicable.

In a first step, the share of Non-Must-Runs (NMR) in the PES is determined. For this case, NMRs are defined as steam power plants, gas turbines, combined cycle power, and diesel plants. Annex II provides a list of all power plants located in the nine countries. The far-left column shows the fuel type. Using above definition allows for classifying all power plants in MR and NMR. This definition is based on the guidance of the tool.

Applying the standard definition of NMRs and MRs to the power plants in the WAPP region allows to determine the share of MRs. The Table 1 below shows that the five-year average total generation amounts to 63.87 TWh/yr whereas the average share of MR amounts to 17.33 TWh/yr. The share of MR amounts to 27.14%.

Table 1: Determination of the Low-Cost/Must-Run Share

Year	2015	2016	2017	2018	2019
Total electricity generation	57,662,545	58,392,520	64,245,113	67,360,720	71,684,098
Average annual electricity generation in five years	63,868,999				
Generation from low-cost/must-run power units	14,058,007	16,630,394	16,833,669	18,290,515	20,852,859
Average generation from total grid generation	17,333,089				
Low-Cost/Must-Run Resource share	27.14%				
Applicability of Simple OM or Average OM	**Simple OM**				

It is concluded that as the share of MR is below 50%, the simple OM can be applied.

STEP 4. CALCULATE THE OPERATING MARGIN EMISSION FACTOR

In a next step the simple OM was calculated. The following input data was used:

- Primary and secondary fuel consumption data, net calorific values was collected directly from the power companies, provided by transmission companies and (in the case of Ghana and Nigeria) the energy regulatory

authorities. Annex II provides a list of all power plants, their fuel consumption as well as their electricity generation for three most recent years, i.e. the historic reference period 2017 – 2019.

- For those plants, where no Net Calorific Value (NCV) data could be collected, we used the lower boundary of the 95% confidence intervals of IPCC default parameters. Annex V provides a list of NCVs used for different fuel types.
- SENELEC provided ranges for NCVs for residual fuel oil; we used the lower range indicated, which is considered to be conservative.
- Annex VI provides a list of IPCC default emission factors for the various fuels. We applied the lower boundary of 95% confidence interval in order to produce a conservative estimate.
- For some power plants, the actual fuel data could not be collected, or data provided produced impossible results. For those plants, the A2 option for detraining plant specific emission factors was applied. These plants are listed in Table 3 below. For the determination of plants' overall emission levels, CDM EB's default efficiency factors were applied.

Below, Table 2 lists those power units out of, where fuel consumption data could not be collected. The related emission levels were determined following Option A2 under paragraph 49 of the tool outlined below.

Table 2: List of Power Plants Following the A2 Calculation Approach

No.	Power Plant Name	No.	Power Plant Name
48	TAPCO - Takoradi 1 Thermal Power Plant (T1)	213	AZURA GT 11
49	TICO - Takoradi 2 Thermal Power Plant (T2)	214	AZURA GT 12
51	Tema Thermal 1 Plant TT1PP	215	AZURA GT 13
63	Karpowership	232	PARAS ENERGY GT1
64	Trojan	233	PARAS ENERGY GT2
69	Genser	234	PARAS ENERGY GT3
99	SONICHAR	235	PARAS ENERGY GT4
100	SONICHAR	236	PARAS ENERGY GT5
101	SONICHAR	237	PARAS ENERGY GT6
102	SONICHAR	238	PARAS ENERGY GT7
156	AFAM IV GT17	239	PARAS ENERGY GT8
157	AFAM IV GT18	240	PARAS ENERGY GT9
198	IHOVBOR GT1	241	PARAS ENERGY GT10
199	IHOVBOR GT2	242	PARAS ENERGY GT11
200	IHOVBOR GT3	247	CALABAR NIPP GT1
201	IHOVBOR GT4	265	Autoproduction (ICS/Dangoté/SOCOCIM)

For the plants Id 198-201, the reported data exhibited an unrealistically high fuel consumption for the year 2018. The fuel consumption of that year was switched to the A2 approach, considering the plant's efficiencies from year 2017 and 2019. This produces more accurate results than the consideration of Tier 1 efficiency ratios.

Based on the above outlined input data, the OM emission factor was determined. Following the tool, Equation (3), this allows in a subsequent step to calculate the OM emission level:

$$EF_{grid,OMsimple,y} = \frac{\sum_m EG_{m,y} \; x \; EF_{EL,m,y}}{\sum_m EG_{m,y}}$$

Where:

$EF_{grid,OMsimple,y}$	Simple operating margin CO2 emission factor in year *y* (tCO2/MWh)
$EF_{CO2,i,y}$	CO2 emission factor of fossil fuel type *i* in year *y* (tCO2/GJ)
$EG_{,y}$	Net electricity generated and delivered to the grid by all power sources serving the system, not including low-cost/must-run power plants/units, in year *y* (MWh)
y	Most recent historical year for which power generation data is available

For those power plants, where the fuel consumption data for the years 2017-2019 was available, we applied the A1 calculation approach (Tool, Equation 4). These are all power plants listed in Annex I, besides those listed Table 2 above).

$$EF_{EL,m,y} = \frac{\sum_i FC_{i,m,y} \; x \; NCV_{i,y} \; x \; EF_{CO2,i,y}}{EG_{m,y}}$$

Where:

$EF_{EL,m,y}$	CO2 emission factor of power unit *m* in year *y* (tCO2/MWh)
$FC_{i,m,y}$	Amount of fossil fuel type *i* consumed by power unit *m* in year *y* (Mass or volume unit)
$NCVi,y$	Net calorific value (energy content) of fossil fuel type *i* in year *y* (GJ/mass or volume unit)
$EF_{CO2,i,y}$	CO2 emission factor of fossil fuel type *i* in year *y* (tCO2/GJ)
$EG_{,m,y}$	Net quantity of electricity generated and delivered to the grid by power unit *m* in year *y* (MWh)
I	All fossil fuel types combusted in power unit *m* in year *y*
Y	Most recent historical year for which power generation data is available

For those power plants, where the fuel consumption data was not available (listed in Table 2 above), the A2 Option was applied (Tool, Equation 5):

$$EF_{EL,m,y} = \frac{EF_{CO2,m,i,y} x \; 3.6}{\eta_{m,y}}$$

Where:

$EF_{EL,m,y}$	CO2 emission factor of power unit *m* in year *y* (tCO2/MWh)
$EF_{CO2,m,i,y}$	Average CO2 emission factor of fuel type *i* used in power unit *m* in year *y* (tCO2/GJ)
$\eta_{m,y}$	Average net energy conversion efficiency of power unit *m* in year *y* (ratio)
m	All power units serving the grid in year *y* except low-cost/must-run power units
y	Most recent historical year for which power generation data is available

The calculation of the emissions considering primary and secondary fuels per power plant and unit is included in Annex II. Based on these calculations, the OM was determined.

The findings are presented in Table 3 below.

Table 3: Calculation of the Simple OM	
2017 Electricity Generation (in MWh)	47,411,443
$EF_{grid,OMsimple,2017}$ (in tCO2)	0.5740
2018 Electricity Generation (in MWh)	49,070,205
$EF_{grid,OMsimple,2018}$ (in tCO2)	0.5867
2019 Electricity Generation (in MWh)	50,831,239
$EF_{grid,OMsimple,2019}$	0.5738
Operating Margin Emission Factor($t\text{-}CO_2/MWh$)	**0.5781**

STEP 5. CALCULATE THE BUILD MARGIN EMISSION FACTOR

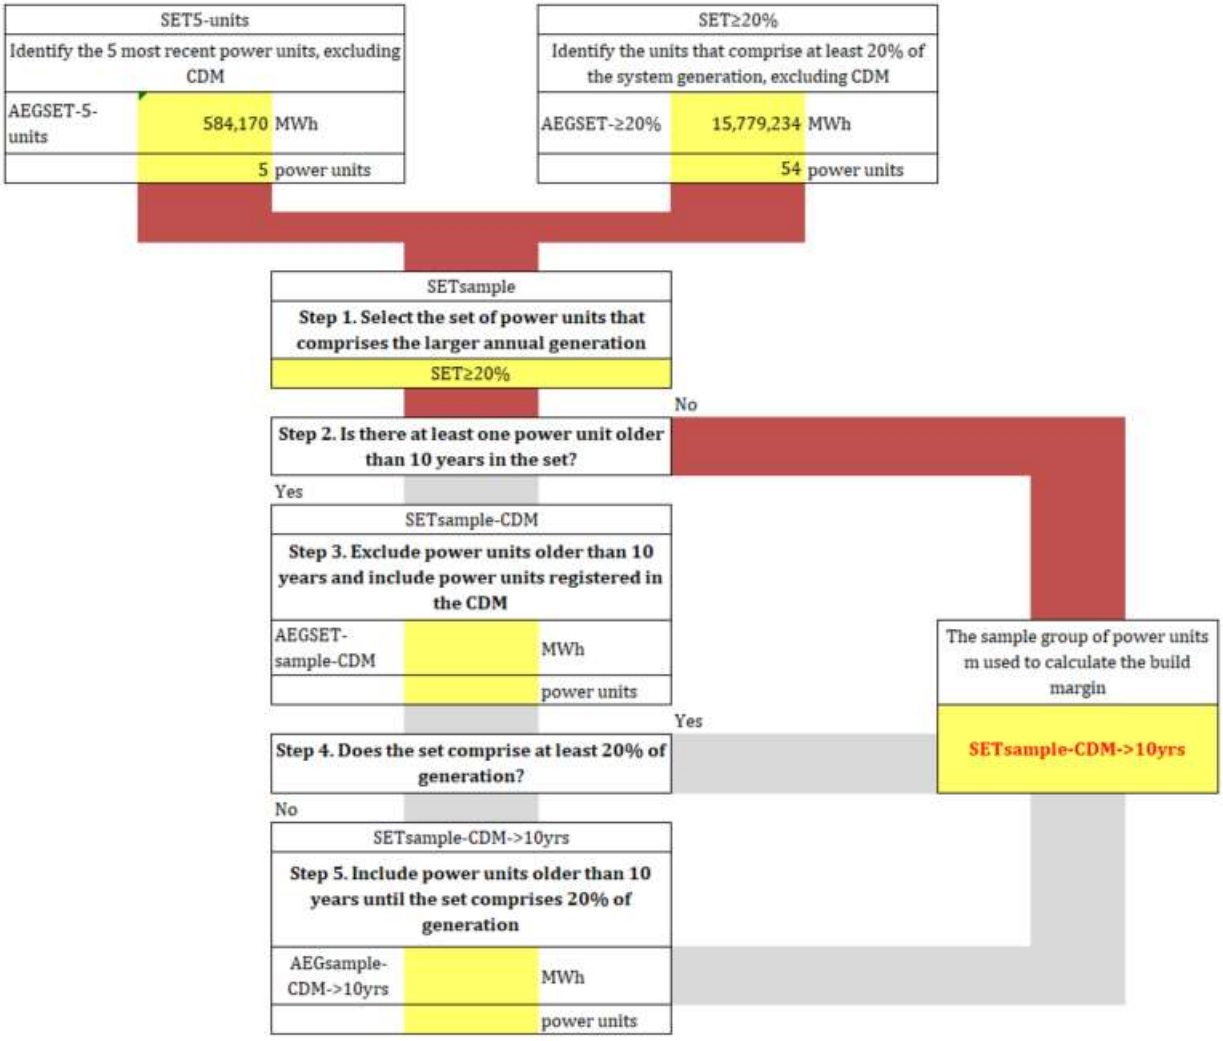
Following the tool, Step 5, §75a-f, the sample group of power units used to calculate the build margin consists of either:

- The set of five power units that have been built most recently; or
- The set of power capacity additions in the electricity system that comprise 20% of the system generation (in MWh) and that have been built most recently.

Following the guidance of the tool, this analysis was conducted for the most recent year (i.e. 2019). The most recent five power plants generate 584,170 MWh (0.8% of total generation). The set, which comprises the last 20% of the system generation, excluding those registered under the CDM covers 71 power units. These plants generate 15,779,234 MWh in 2019 (20.00% of total generation). Therefore, the latter option was applied, as it encompasses the set of power capacity additions in the electricity system that comprise 20% of the system generation (in MWh) and that have been built most recently.

As this set does not comprise power plants, which are older than 10 years, registered CDM plants were included. This results in a set of 15,779,234 MWh in 2019. This procedure is illustrated by the graph (Figure 2) below.

Figure 2: Procedure for selecting Built Margin Power Plants



Following this approach results in a BM, which comprises 54 facilities commissioned between 2014 and 2019.

According to the tool, the build margin emissions factor is the generation-weighted average emission factor (tCO2/MWh) of all power units m identified in step 5 above. To calculate the BM, the following Equation was applied (Tool, Equation 15):

$$EF_{grid,BM,y} = \frac{\sum_m EG_{m,y} x\ EF_{EL,m,y}}{\sum_m EG_{m,y}}$$

Where:

$EF_{grid,BM,y}$	Build margin CO_2 emission factor in year y (tCO_2/MWh)
$EG_{m,y}$	Net quantity of electricity generated and delivered to the grid by power unit m in year y (MWh)
$EF_{EL,m,y}$	CO_2 emission factor of power unit m in year y (tCO_2/MWh)
m	Power units included in the build margin
y	Most recent historical year for which power generation data is available

Following this approach leads to the determination of the BM emission level for 2019. The assessment of the BM is included in Annex III. The results are presented in **Fehler! Verweisquelle konnte nicht gefunden werden.**.

Table 4: Determination of the Built Margin Emission Factor	
Number of Power Units	54
BM Generation 2019 (in MWh)	15,779,234
BM Emissions 2019 (in tCO2)	8,777,581
Built Margin Emission Factor (in tCO2/MWh)	**0.5563**

STEP 6. CALCULATE THE COMBINED MARGIN EMISSIONS FACTOR

Based on standard weighting of the BM and the OM, the West African power system offers a GEF of 0.5672 tCO2/MWh. Details are found in Table 5. Guidance on the selection of alternative weights can be found in the tool.

Table 5: Summary of the Emission Factor for the West African Power System			
OM Emission Factor (in t-CO_2/MWh)	0.5781		
BM Emission Factor (in t-CO_2/MWh)	0.5563		
	Weight of the OM	Weight of the BM	CM Emission Factor (in t-CO2/MWh)
Wind and solar power generation project activities for the first crediting period and for subsequent crediting periods	0.75	0.25	**0.5727**
All other projects for the first crediting period	0.5	0.5	**0.5672**
All other projects for the second and third crediting period	0.25	0.75	**0.5617**

Annex I: Fuel Consumption, Fuel Quality and Generation Data

The Table 6 below provides the key raw data for the determination of OM and BM. The data is colour coded to indicate data sources. Green refers to data provided by WAPP member utilities; orange refers to data provided by transmission companies and regulatory authorities. The table below provides only data from utilities. If information on e.g. NCVs is not available / could not be disclosed, the model chooses the conservative limit of the 95% confidence intervals of corresponding default values, as provided in Annex V and VI. Please note that for the Net Generation columns and Fuel Consumption columns: empty cells indicate that there is no data for the plant for that year, as the plant was not commissioned yet; a '0' indicates that data was provided but the generation / consumption was zero. This equally applies to Annex III and IV.

Table 6: Fuel Consumption, Fuel Quality and Net Generation Data by Power Plant and Year

No.	Name of Power Unit	Comissioning Date		Installed Capacity (in MW)	Net Electricity Generation (MWh			Main Fuel Type/ Energey Source	Main Fuel Consumption (in t)			Net Calorific Value of Main Fuel (in GJ/t)			Scondary Fuel Type/ Energey Source	Secondary Fuel Consumption (in t)			Net Calorific Value of Secondary Fuel (in GJ/t)

ANNEX III: DETERMINATION OF THE BUILT MARGIN

Table 7: Calculation of the Build Margin for 2019

No.	Name of Power Unit	Date Commissioned		Generation (in MWj)	Emissions (in tCO2)	Share of Generation
		Year	Month			
6	Maria-Gleta 1	2019	8	252,306	149,120	0.3%
28	AGGREKO THERMIQUE (location)	2019	6	149,549	103,944	0.5%
66	Cenpower GT1	2019	6	58,763	49,722	0.6%
67	Cenpower GT2	2019	6	59,675	47,475	0.7%
68	Cenpower ST1	2019	6	63,878	0	0.7%
70	Amandi	2019	10	149,000	122,967	0.9%
230	TRANS-AMADI GT3	2019	7	80,828	58,120	1.0%
242	PARAS ENERGY GT11	2019	1	50,897	25,188	1.1%
73	Mienergy Solar Plant	2018	9	21,000	-	1.1%
81	Albatros Energy Mali (IPP)	2018	10	118,814	69,017	1.3%
137	SAPELE GT1-14	2018	12	7,682	5,418	1.3%
213	AZURA GT 11	2018	5	562,870	293,413	2.0%
214	AZURA GT 12	2018	5	562,870	293,413	2.7%
215	AZURA GT 13	2018	5	562,870	293,413	3.5%
240	PARAS ENERGY GT9	2018	9	50,845	25,163	3.5%
241	PARAS ENERGY GT10	2018	9	50,845	25,163	3.6%
257	Solaire DIASS	2018		13,638	-	3.6%
264	Sendou	2018		302,868	236,462	4.0%
26	ZIGA	2017	4	1,558	-	4.0%
27	ZAGTOULI	2017	9	57,283	-	4.1%
47	Soubre	2017		1,604,715	-	6.1%
65	AKSA	2017	11	608,000	602,608	6.9%
80	Aksa enerji (Location)	2017	8	142,149	101,852	7.1%
210	IBOM GT2	2017	6	93,619	63,076	7.2%
53	Kpone Thermal Power Plant KTPP	2016		392,966	269,106	7.7%
54	Ameri	2016		1,483,400	848,731	9.6%
64	Trojan	2016		0	-	9.6%
69	Genser	2016	12	377	223	9.6%
71	Safisana	2016	9	317	0	9.6%
72	BXC Solar	2016	1	27,000	-	9.7%
83	SES (Location)	2016	5	70,467	47,461	9.8%
98	GOROU BANDA	2016		164,437	98,599	10.0%
227	GBARAIN GT-2	2016	4	257,442	166,283	10.3%
258	Gorée	2016		0	-	10.3%
260	Tobene Power	2016	3	257,275	159,074	10.6%

261	Contour Global-Ex GTI	2016	4	495,262	285,139	11.3%
262	Location - Aggreko	2016		92,133	62,736	11.4%
265	Autoproduction (ICS/Dangoté/SOCOCIM)	2016	3	52,467	44,670	11.5%
34	Ciprel TAV	2015	12	789,246	390,109	12.5%
37	Azito TAV	2015	6	911,321	475,054	13.6%
63	Karpowership	2015	12	1,510,000	1,094,448	15.6%
184	ALAOJI NIPP GT1	2015	4	52,363	34,616	15.6%
185	ALAOJI NIPP GT2	2015	4	52,363	34,616	15.7%
186	ALAOJI NIPP GT3	2015	4	52,363	34,616	15.8%
187	ALAOJI NIPP GT4	2015	4	52,363	34,616	15.8%

ANNEX IV: DEFAULT NCVS, UPPER AND LOWER LIMITS

Table 8: Default NCVs, Lower and Upper Limits

Fuel type	Description	Net calorific value (TJ/Gg)	Lower	Upper
	Crude Oil	42.3	40.1	44.8
	Orimulsion	27.5	27.5	28.3
	Natural Gas Liquids	44.2	40.9	46.9
Gasoline	Motor Gasoline	44.3	42.5	44.8
	Aviation Gasoline	44.3	42.5	44.8
	Jet Gasoline	44.3	42.5	44.8
	Jet Kerosene	44.1	42	45
	Other Kerosene	43.8	42.4	45.2
	Shale Oil	38.1	32.1	45.2
	Gas/Diesel Oil	43	41.4	43.3
	Residual Fuel Oil	40.4	39.8	41.7
	Liquefied Petroleum Gases	47.3	44.8	52.2
	Ethane	46.4	44.9	48.8
	Naphtha	44.5	41.8	46.5
	Bitumen	40.2	33.5	41.2
	Lubricants	40.2	33.5	42.3
	Petroleum Coke	32.5	29.7	41.9
	Refinery Feedstocks	43	36.3	46.4
Other Oil	Refinery Gas	49.5	47.5	50.6
	Paraffin Waxes	40.2	33.7	48.2
	White Spirit and SBP	40.2	33.7	48.2
	Other Petroleum Products	40.2	33.7	48.2
	Anthracite	26.7	21.6	32.2
	Coking Coal	28.2	24	31
	Other Bituminous Coal	25.8	19.9	30.5
	Sub-Bituminous Coal	18.9	11.5	26
	Lignite	11.9	5.5	21.6
	Oil Shale and Tar Sands	8.9	7.1	11.1
	Brown Coal Briquettes	20.7	15.1	32
	Patent Fuel	20.7	15.1	32
Coke	Coke Oven Coke and Lignite Coke	28.2	25.1	30.2
	Gas Coke	28.2	25.1	30.2
	Coal Tar	28	14.1	55
Derived Gases	Gas Works Gas	38.7	19.6	77

	Coke Oven Gas	38.7	19.6	77
	Blast Furnace Gas	2.47	1.2	5
	Oxygen Steel Furnace Gas	7.06	3.8	15
	Natural Gas	48	46.5	50.4
	Municipal Wastes (non-biomass fraction)	10	7	18
	Industrial Wastes	NA	NA	NA
	Waste Oil	40.2	20.3	80
	Peat	9.76	7.8	12.5
Solid Biofuels	Wood/Wood Waste	15.6	7.9	31
	Sulphite lyes (black liquor)	11.8	5.9	23
	Other Primary Solid Biomass	11.6	5.9	23
	Charcoal	29.5	14.9	58
Liquid Biofuels	Biogasoline	27	13.6	54
	Biodiesels	27	13.6	54
	Other Liquid Biofuels	27.4	13.8	54
GasBiomass	Landfill Gas	50.4	25.4	100
	Sludge Gas	50.4	25.4	100
	Other Biogas	50.4	25.4	100
Other non-fossil fuels	Municipal Wastes (biomass fraction)	11.6	6.8	18

Source: 2006 IPCC Guidelines for National Greenhouse Gas Inventories, page 1.18
Notes: 1 The lower and upper limits of the 95 percent confidence intervals, assuming lognormal distributions, fitted to a dataset, based on national inventory reports, IEA data and available national data. A more detailed description is given in section 1.5.
2 Japanese data; uncertainty range: expert judgement
3 EFDB; uncertainty range: expert judgement
4 Coke Oven Gas; uncertainty range: expert judgement
5-7Japan and UK small number data; uncertainty range: expert judgement
8 For waste oils the values of Lubricants" are taken
9 EFDB; uncertainty range: expert judgement
10 Japanese data ; uncertainty range: expert judgement
11 Solid Biomass; uncertainty range: expert judgement
12 EFDB; uncertainty range: expert judgement
13-14Ethanol theoretical number; uncertainty range: expert judgement;
15 Liquid Biomass; uncertainty range: expert judgement
16 -18Methane theoretical number uncertainty range: expert judgement; "

ANNEX V: DEFAULT CO2 EMISSION FACTORS FOR COMBUSTION

Table 9: Default CO2 Emission Factors for Combustion

Fuel type English description		Default carbon content (kg/GJ)	Default carbon oxidation factor	Effective CO2 emission factor (kg/TJ) 2		
				Default value 3	95% confidence interval	
		A	B	C=A*B*44/ 12*1000	Lower	Upper
	Crude Oil	20	1	73,300	71,100	75,500
	Orimulsion	21	1	77,000	69,300	85,400
	Natural Gas Liquids	17.5	1	64,200	58,300	70,400
Gasoline	Motor Gasoline	18.9	1	69,300	67,500	73,000
	Aviation Gasoline	19.1	1	70,000	67,500	73,000
	Jet Gasoline	19.1	1	70,000	67,500	73,000
	Jet Kerosene	19.5	1	71,500	69,700	74,400
	Other Kerosene	19.6	1	71,900	70,800	73,700
	Shale Oil	20	1	73,300	67,800	79,200
	Gas/Diesel Oil	20.2	1	74,100	72,600	74,800
	Residual Fuel Oil	21.1	1	77,400	75,500	78,800
	Liquefied Petroleum Gases	17.2	1	63,100	61,600	65,600
	Ethane	16.8	1	61,600	56,500	68,600
	Naphtha	20	1	73,300	69,300	76,300
	Bitumen	22	1	80,700	73,000	89,900
	Lubricants	20	1	73,300	71,900	75,200
	Petroleum Coke	26.6	1	97,500	82,900	115,000
	Refinery Feedstocks	20	1	73,300	68,900	76,600
Other Oil	Refinery Gas	15.7	1	57,600	48,200	69,000
	Paraffin Waxes	20	1	73,300	72,200	74,400
	White Spirit & SBP	20	1	73,300	72,200	74,400
	Other Petroleum Products	20	1	73,300	72,200	74,400
	Anthracite	26.8	1	98,300	94,600	101,000

	Other Bituminous Coal	25.8	1	94,600	89,500	99,700
	Sub-Bituminous Coal	26.2	1	96,100	92,800	100,000
	Lignite	27.6	1	101,000	90,900	115,000
	Oil Shale and Tar Sands	29.1	1	107,000	90,200	125,000
	Brown Coal Briquettes	26.6	1	97,500	87,300	109,000
	Patent Fuel	26.6	1	97,500	87,300	109,000
Coke	Coke oven coke and lignite Coke	29.2	1	107,000	95,700	119,000
	Gas Coke	29.2	1	107,000	95,700	119,000

	Coal Tar	22	1	80,700	68,200	95,300
Derived Gases	Gas Works Gas	12.1	1	44,400	37,300	54,100
	Coke Oven Gas	12.1	1	44,400	37,300	54,100
	Blast Furnace Gas	70.8	1	260,000	219,000	308,000
	Oxygen Steel Furnace Gas	49.6	1	182,000	145,000	202,000
	Natural Gas	15.3	1	56,100	54,300	58,300
	Municipal Wastes (non-biomass fraction)	25	1	91,700	73,300	121,000
	Industrial Wastes	39	1	143,000	110,000	183,000
	Waste Oil	20	1	73,300	72,200	74,400
	Peat	28.9	1	106,000	100,000	108,000
Solid Biofuels	Wood/Wood Waste	30.5	1	112,000	95,000	132,000
	Sulphite lyes (black liquor)	26	1	95,300	80,700	110,000
	Other Primary Solid Biomass	27.3	1	100,000	84,700	117,000
	Charcoal	30.5	1	112,000	95,000	132,000
Liquid Biofuels	Biogasoline	19.3	1	70,800	59,800	84,300
	Biodiesels	19.3	1	70,800	59,800	84,300
	Other Liquid Biofuels	21.7	1	79,600	67,100	95,300
Gas biomass	Landfill Gas	14.9	1	54,600	46,200	66,000
	Sludge Gas	14.9	1	54,600	46,200	66,000
	Other Biogas	14.9	1	54,600	46,200	66,000
Other non-fossil fuels	Municipal Wastes (biomass fraction)	27.3	1	100,000	84,700	117,000

Source: 2006 IPCC Guidelines for National Greenhouse Gas Inventories, page 1.23

Notes: 1 The lower and upper limits of the 95 percent confidence intervals, assuming lognormal distributions, fitted to a dataset, based on national inventory reports, IEA data and available national data. A more detailed description is given in section 1.5, 2 TJ = 1000GJ

3 The emission factor values for BFG includes carbon dioxide originally contained in this gas as well as that formed due to combustion of this gas.

4 The emission factor values for OSF includes carbon dioxide originally contained in this gas as well as that formed due to combustion of this gas

5 Includes the biomass-derived CO2 emitted from the black liquor combustion unit and the biomass-derived CO2 emitted from the kraft mill lime kiln.
