Dear Sir/Madame,

The Government of St. Kitts and Nevis, as a Small Island Developing State is particularly vulnerable to the impacts of climate change. Although our global contributions to greenhouse gas emissions are very low, the Government and people of St. Kitts and Nevis strive to develop a low-carbon resilient economy. One such initiative that would support such a strategy is the establishment of Standardized Baseline Grid Emission Factor (GEF) for the national grids.

Through a participatory approach, the grid emissions factors for the St. Kitts and Nevis have been developed. In my capacity as DNA for the Clean Development Mechanism for St. Kitts and Nevis, I wish to submit through this medium the proposed standardized baseline Grid Emission Factor (GEF) for Saint Kitts and Nevis for your review and subsequent approval.

Forwarded for your kind consideration.

Kindest Regards,

Ms. June Hughes
